

HAKKI PILKE Z100

HYDRAULIHALKOJA

A solution for splitting large logs.

The length of the splitting motion is adjustable according to the length of the log.

Splitting with just one motion and without splinters.

Adjustment of the splitting blade:

Instant adjustment of the height of the splitting blade enables splitting into two or four pieces.

Easy to control:

Pull the levers together and the splitting starts. Returns back into starting position automatically.

No splinters:

With a single splitting motion the log is halved splinterlessly.

Splitting Blade:

The height of the splitting blade can be easily adjusted (four-way splitting is possible) The splitting action can be smoothly adjusted according to the length of the log.

TECHNICAL SPECIFICATIONS:

Hydraulics required:

Required oil flow and oil pressure:

Splitting cylinder diameter:

Splitting Force:

Cycle time:

Adjustable Splitting Length

Maximum Log diameter

Optional:
